Clean Version of the Amended Claims

D

65. A telecommunications sale system comprising:  
a plurality of buyers;  
a plurality of sellers; *epo management system 100* *epos.*  
a network site connected to a server node for receiving sell and purchase orders  
from the sellers and buyers, respectively, for telecommunications services, each of said  
sell and purchase orders specifying a class of service; and  
means for matching the sell and purchase orders and brokering a transaction of  
telecommunications service, on the basis of at least one of the specified classes of  
service.

C

66. The system of claim 65, further comprising an interconnection node between a seller  
telecommunication network and a buyer telecommunication network so as to enable a  
buyer to use telecommunications service purchased from a seller.

67. The system of claim 66, wherein said interconnection node is connected to said  
server node through a communication line and receives instructions from said server node  
for connecting said buyer and said seller telecommunications networks.

b

75. The system of claim 65, wherein said at least one of the specified classes of service  
includes Answer Seizure Ratio.

c

76. The system of claim 65, wherein said at least one of the specified classes of service  
includes Post Dial Delay.

77. The system of claim 66, wherein said interconnection node includes a quality  
monitoring equipment.
